Introduction

Content

this is how you make citations: MedMamba¹

the yue2024medmamba part must be an id in references in frontmatter block above

Problem description

Base model description

Content

then inline formula: $l/2Hz$

Embedding images:

¹Yue et. al¹, “MedMamba: Vision Mamba for Medical Image Classification.”

big formula, will be centered on page:

$$\arg \min_{G_\theta} \|v_k - G(z_k, k, \mathcal{F}_{\text{enc}}(X_l); \theta)\|_2^2$$

another formula example:

$$v_t = \sqrt{\bar{\alpha}_t} \epsilon - \sqrt{1 - \bar{\alpha}_t} x_0$$

To put greek letters in text, just use inline formula : ϵ and x_0 .

Rejection model description

a markdown table:

Model	LSD
GT-Mel	0.61
Unprocessed	1.99-4.25
NVSR-DNN	1.13- 1.67
NVSR-ResUNet	1.7- 0.95
AUDIOSR	0.99- 0.73
AUDIOSR + Noise (our model)	2 - 1.2

Conclusion
